

9JACONNECT

Front-End Redesign Work Pack

Visual Redesign Only — No Functional Changes

Prepared for: Front-End Developer | Version 1.0 | July 2026

THE ONE RULE OF THIS PROJECT

Every page, field, button, flow, and piece of copy in this pack is marked [LOCKED]. That means: the look changes, nothing else does. If a page isn't described here, ask before touching it — don't assume.

1. Purpose of This Document

9jaconnect.com is live and in active use. The current design has been assessed and the site needs a visual identity overhaul. This is purely a design and front-end presentation project.

This document gives you two things:

- A locked functional specification — the complete list of pages, fields, and actions that must survive the rebuild unchanged, so there's no ambiguity about what "don't change the functionality" actually covers.
- The current brand starting points (colours, fonts, logo) — provided as context, not constraints. The developer has already shown design judgement the director likes, and has creative freedom over the new direction.

Not in scope for this document: hosting, backend, database, or API changes. This is the src/front-end presentation layer of a React (Vite) single-page application that is already wired to a live backend API — none of that wiring is to be touched until the redesign is approved.

2. What Changes vs. What Doesn't

Changing (developer's creative call)

- Colour palette, typography, spacing, shadows, corner radii — the whole visual system
- Layout and composition of any page, section ordering within a page, imagery/illustration style
- Component styling (buttons, cards, forms, nav, footer) — visual treatment only
- Icon style (the current icon set can be replaced)
- Whether the redesign extends to the admin dashboard's visual polish

Not changing (locked)

- Every route/page listed in Section 4, and every field, label, button, and action on it
- Form fields — names, validation, required/optional status, order of steps in multi-step flows
- All copy that reflects platform rules or legal/functional meaning (e.g. sole-trader declaration wording, review-gating logic, verification statuses)
- API calls, authentication (JWT + refresh token flow), Google OAuth, routing structure (URLs)
- Any business logic — who can see what, what triggers a notification, ticket/review state machines

3. Current Brand Assets (Starting Points, Not Constraints)

These exist in the live codebase today. Hand them to the developer as reference material — what's currently there — not as a brief for what the new design should look like.

Logo

- One brand asset in the repo: a favicon-style mark — green circle, a stylised Nigeria map silhouette in mustard/gold, with a large "9" over it. Supplied at multiple sizes (16px–512px) plus an apple-touch-icon. This is also to be used as the business logo too.

Current colour palette (CSS custom properties, index.css)

- Primary: a green scale from #042010 (near-black green) up to #F0FDF6 (near-white mint) — roughly 11 steps
- Accent: an amber/gold scale, #92580A to #FFFBEB

Current typography

- Headings: "Fraunces" (serif, Google Font)

- Body: "Outfit" (sans-serif, Google Font)
- Both are currently loaded and used purely via CSS variables (--font-display, --font-body) — trivial to swap, no code restructuring needed.

Other current design-system traits worth naming

- Corner radii: 6 / 10 / 16 / 24px scale; soft drop shadows on cards; a single global stylesheet (index.css, ~440 lines) with no component library or CSS framework (no Tailwind, no MUI) — plain CSS custom properties throughout.
- This means there is no framework lock-in constraining the rebuild — the developer can restructure the styling approach entirely if he prefers (Tailwind, CSS modules, styled-components, etc.), as long as the rendered pages/fields/behaviour match Section 4.

4. Locked Functional Inventory — Page by Page

Every page currently live on the platform. Fields/actions marked here are the frozen functional spec.

4.1 Public / Marketing

Page / Route	Purpose	Fields / Data Shown	Actions / Functionality
/ (Home)	Landing page, primary entry point	Hero headline + search widget (State, LGA, Category dropdowns); "What are you looking for?" category section; "Hire with confidence" trust section; "Top rated individuals" section; "Built on trust" section; final CTA banner	Search submits to /find with filters; category cards link to /find; sign-up CTAs link to customer/professional signup
/find	Search & browse all professionals	Filters: State, Area (LGA), Category, Keyword; result cards; "no professionals found" empty state	Filtering re-queries and updates result list; cards link through to professional profile
/professionals/:id	Individual professional's public profile	Name/trade name, category, location, rating, service description, rates (hourly/day-rate/project, as set by professional), work gallery, verified reviews list, "Request Service" form (message + fields)	Customer submits a service request/ticket from this page; "not found" state if invalid ID

4.2 Authentication & Signup

Page / Route	Purpose	Fields / Data Shown	Actions / Functionality
/login	Login for customers, professionals, and admins	Email, Password	Submits credentials, issues JWT session; Google OAuth option present
/signup/customer	Customer account creation	Full name, Email, Phone, Password, Confirm password	Creates account, triggers verification email flow
/signup/customer/check-email* / /signup/professional/check-email	Post-signup email confirmation prompt	Confirmation message, resend option	No further input; waits for email verification
/signup/professional	Sole-trader professional registration (multi-section)	Personal Details: full name, email, phone, WhatsApp, password, confirm password, optional referral code; Your Location: State, LGA, address	Creates professional account with pending listing status; referral code field optional
/forgot-password	Request password reset	Email	Sends reset link/token
/reset-password and /admin/reset-password	Set new password from reset link	New password, Confirm new password	Completes password reset; separate route used for admin resets
/verify-email	Confirms email verification token from link	Status message (verifying / success / error states)	No user input; auto-processes token from URL

4.3 Onboarding & Verification

Page / Route	Purpose	Fields / Data Shown	Actions / Functionality
/onboarding/customer	First-time customer onboarding (multi-step)	Step 1: about yourself fields; Step 2: "what are you looking for" preference fields; Step 3: welcome confirmation screen	Multi-step wizard; completes and routes into customer dashboard

Page / Route	Purpose	Fields / Data Shown	Actions / Functionality
/verify-identity	Identity document upload for professionals	Document upload; status states: submitted, under review, verified	Uploads ID document; displays current verification status

4.4 Account Management

Page / Route	Purpose	Fields / Data Shown	Actions / Functionality
/account-settings (customer)	Customer account management	Profile Photo upload; Personal Information fields; Identity Verification status; Danger Zone (account deletion request with feedback text field)	Update profile photo/info; submit account deletion request (with confirmation step)
/dashboard/professional/settings	Professional account management	Profile Photo upload; Personal Information fields; Verification Status; Danger Zone (account deletion request with feedback text field)	Same pattern as customer settings, professional-specific status data

4.5 Customer Dashboard & Tickets

Page / Route	Purpose	Fields / Data Shown	Actions / Functionality
/dashboard/customer	Customer home dashboard	Pending Reviews section; My Service Tickets list; empty state ("No tickets yet")	Links into individual tickets and review flow
/dashboard/customer/tickets	Full customer ticket history	Ticket list, statuses, empty state	Navigate to ticket detail
/tickets/:ticketId	Individual ticket detail + messaging	Ticket details; Messages thread; message composer	Send message (Enter to send); view ticket status changes in real time
/review/:ticketId	Leave a verified review (gated to completed ticket)	Price/Time/Quality rating inputs, written review text field, proof upload; "Review submitted" confirmation state	Submits review linked to the specific completed ticket — cannot be submitted without a valid completed ticket ID

4.6 Professional Dashboard & Profile Management

Page / Route	Purpose	Fields / Data Shown	Actions / Functionality
/dashboard/professional	Professional home dashboard	Service Tickets summary/list; empty state	Links into ticket management
/dashboard/professional/tickets	Full professional ticket history	Ticket list, statuses, empty state	Update ticket status (e.g. mark in-progress/completed) from here or ticket detail
/dashboard/professional/profile	Edit public professional profile	Basic Information (name, trade name, category etc.); Service Description (first-person, shown publicly); Your Rates (hourly / day-rate / project figures); Location fields	Saves changes to the live public profile shown at /professionals/:id

4.7 Admin

Page / Route	Purpose	Fields / Data Shown	Actions / Functionality
/admin/dashboard	Admin overview	Quick Actions; Recent Activity feed; Platform Health stats	Shortcuts into other admin sections

Page / Route	Purpose	Fields / Data Shown	Actions / Functionality
/admin/professionals	Manage professional listings	Filterable/searchable table of professionals	Approve / reject (with reason) / suspend listings — core sole-trader-policy enforcement point
/admin/users	Manage all user accounts	Searchable user table with detail view	View / deactivate accounts
/admin/reviews	Review moderation	Review list with detail view	Flag / remove reviews that violate platform rules
/admin/communications	Platform communications	Communication tools/sections (email or messaging oriented)	As currently implemented — treat as locked pending direct confirmation from admin team on exact actions
/admin/categories	Manage service categories	Add New Category form (name, slug, icon, short description); existing category list	Create / edit categories and subcategories shown platform-wide on /find and Home

4.8 Global / Shared

Page / Route	Purpose	Fields / Data Shown	Actions / Functionality
Navbar (all pages)	Primary navigation	Logo (text-based), Find Professionals link, How It Works anchor link, Login, Sign Up as Customer, Sign Up as Professional, or (logged in) My Dashboard + Log Out	Standard nav — links unchanged, visual treatment fully open
Footer (all pages)	Site-wide footer	Logo + tagline + sole-trader-only disclaimer; Platform links; Categories links; Contact details (email, phone, Lagos address); Legal links (Terms, Privacy, Listing Guidelines); social links; "Powered by" credit; copyright line	Static links — content unchanged, visual treatment fully open
404 (NotFound)	Catch-all invalid route	"Page not found" message	Link back to home
